

## GRL® diagnostics

Knowing what you need to do to mature a grant-eligible project can take time and effort.

Utilising over a decade of successful grant delivery we have created our unique GRL® scoring system. GRL® provides a robust way to assess your project's Grant Readiness Level.

### What is GRL®?

GRL® is a diagnostic scoring system, unique to Granted, that measures the grant readiness of your project, allowing for quick identification of strengths and weaknesses and areas of focus.

Put simply it provides clear language and a proven approach to the complexities and intricacies of grant projects.

### How does it work?

It works by measuring your innovation across 10 scales, actively linking project development, targeted intervention management (through Granted and partners), and KPI measurement across portfolios and time, in a single unified language describing project maturity.

The result? A Grant Readiness Level, including areas for improvement to strengthen your innovation and better your chances of funding success as well as long-term business longevity.

### Testimonial

“Working with Granted and their GRL® assessment tool was really valuable for Cambridge Cleantech and the Desafia London programme. The GRL® provided real insight into the potential for the programme's high growth Spanish SMEs to understand their potential to receive grant funding as part of their UK internationalisation strategies.” - Sam Goodall, Cambridge Cleantech.
